

HP Imaging and Printing Software and Driver Information for Windows® 7

Check compatibility of your HP Imaging and Printing products with Windows® 7

HP is working to ensure customers have the best experience with HP imaging and printing products connected to PCs running Windows® 7. Software and drivers for these products will be available as part of the Windows® 7 operating system, on Microsoft's Windows® Update, or as a download from hp.com.

HP and Microsoft have partnered to include solutions in the Windows® 7 operating system for the majority of HP imaging and printing products introduced in recent years. Older products may have limited driver support, limited features, or both.

If your legacy product is not listed, no support is offered for Windows® 7. Newer products available in the market are the preferred choice for most customers adopting Windows® 7. HP Software & Driver downloads will be available closer to the official release of Windows® 7, which is scheduled for October 22, 2009.
